Dear Hiring Team,

I am a Computer Science graduate from **IIIT Guwahati (2020)** with **six years of experience** building and scaling mobile applications that serve hundreds of millions of users. My work spans native **Android (Kotlin / Java)**, **React Native**, iOS, backend services (Node.js, Java), and **AI-assisted engineering workflows** — and I have owned the full development lifecycle from architecture and feature delivery through CI/CD, performance optimisation, and production operations.

Selected highlights from my career:

- **Dream11 — CriQ (0 → 1):** Led end-to-end engineering of a brand-new cricket product across Android, React Native, Node.js, and Java; set up GitHub Actions CI/CD and CodePush OTA pipelines; shipped separate builds for Indian and international markets.
- **53 % build-time reduction:** Profiled and restructured the Gradle task graph, introduced remote build caching and dependency parallelism — cutting CI time from 30 min to 14 min and saving ~ 2 engineer-hours per developer per day.
- **Intervention Framework — ShareChat:** Sole architect of an app-wide, lifecycle-aware overlay management system (Kotlin Coroutines Actor, MVI, Dagger-Hilt) that was adopted company-wide across all Android teams, eliminating an entire class of UX race-condition bugs.
- **Dynamic Feature Module migration:** Migrated FFMPEG and Agora RTC to on-demand DFMs at ShareChat, achieving **15 MB+** base APK reduction and improving first-install conversion rates.
- **AI engineering in production:** Built agentic PR-review and unit-test-generation workflows; evaluated and shipped on-device ML models for real-time prediction use cases at Dream11.

While mobile engineering is my core expertise, I have consistently contributed across **backend, web, and platform layers** — enabling me to collaborate fluidly with cross-functional teams and deliver end-to-end solutions without handoff bottlenecks. Having led architecture reviews, mentored junior engineers, and driven technical roadmaps at Dream11 and ShareChat, I bring both individual contributor depth and the judgment of a senior technical leader.

I am actively exploring opportunities where I can contribute as a versatile senior or staff engineer — working on products that challenge scale, craft, and engineering excellence in equal measure. I would welcome the chance to discuss how my experience maps to the challenges your team is solving.

Thank you for your time and consideration.

Yours sincerely,

Shivam Tiwari

Senior Software Engineer
Dream11, Mumbai
